

LAMINATED GLULAM POST

AESTHETIC AND PERFORMANT

Our laminated glulam post made with european spruce and pine is known for its technical performances superior to those made of solid wood.

The special feature of our product is that it is less prone to cracking, warping and twisting than the solid wood pole. In addition, it is easy to process to provide a durable product with a longer service life.

Our laminated glulam post is the ideal product for gallery rails and post and outdoor fences.

MANUFACTURING:

At first, the wood lamellas are dried, sorted (visually or ultrasonically) and purged of their defects. Then, glue is applied to the wooden lamellas, superimposed in the direction of the wood fiber and pressed. After planed, treatments or finishes can be applied to the laminated glulam post in order to obtain the durability and the desired appearance.

AVAILABLE DIMENSIONS:

Thickness ranging from 2-23 / 64 " to 5-33 / 64 " (60 to 140 mm)

Width ranging from 2-23 / 64 " to 5-33 / 64 " (60mm to 140mm)

Length ranges from 5'9 " to 14'8 " (1800 to 4500 mm)
