

# STARR-LAM™

## GLULAM SCAFFOLD PLANK

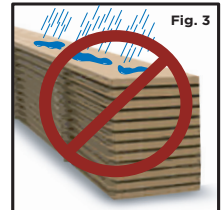

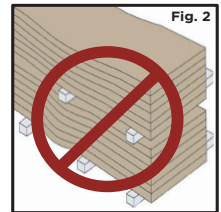

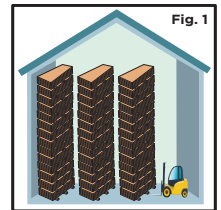

### RECOMMENDED STORAGE METHODS

Proper storage will help protect your planks from damage that may reduce their useful life. To help ensure optimal performance and the longevity of your planks, please carefully read the following. Immediately remove from service planks that show damage and wear as this may lead to injury or death.

**STARR-LAM™** scaffold planks are intended to be used exclusively as scaffold planks. Other use may cause damage that will make the planks unsafe for their intended use.

### STORAGE RECOMMENDATIONS

- Keep scaffold planks dry. The strength, stiffness and performance of a scaffold plank are reduced by increased moisture content.
- Store in a dry, well ventilated area to avoid wood decay and plank deterioration. Always allow wet planks to dry quickly by providing proper air circulation. (Fig. 1)
- Keep planks of similar lengths stacked in bundles off the ground and supported with stickers spaced no more than 8' apart. Planks are separated with stickers that are vertically aligned between each row and line up with the ground stickers. This will allow for easy forklift access and provide air circulation. Misalignment of the stickers can damage the planks by creating a bow. (Fig. 2)
- Protect planks from rain, snow, ground moisture, including excessive exposure to water and temperatures exceeding 65 degrees Celsius. Store planks indoors in a well drained location or cover with a porous cover or a tarp leaving bundle ends open to allow air circulation. (Fig. 3)
- Do not store heavy objects on the scaffold planks. (Fig. 4)
- When pulling planks from storage, moisture content for proper use should be between 8% to 19%.

**BEFORE USE :** Always inspect your scaffold planks.

**The above guidelines** are not all-inclusive, nor considered to replace other safety and precautionary measures. They are not intended to supersede the requirements or regulations as spelled out by the Occupational Safety and Health Administration (OSHA), nor the standards outlined by the American National Standards Institute (ANSI).
